

ACCESS CONTROL MANAGEMENT

ABSTRACT

A method of access control management includes
5 determining a private network address for a user in connection
with the user accessing a network resource, determining an
access control list entry for the user based on an access
control policy, translating a public network address to the
private network address for the user accessing the network
10 resource, and allowing or blocking the user access based on
the access control list entry, wherein determining the access
control list entry is performed before translating the public
network address to the private network address.
